MediaMessenger Pro™

Network Connected Digital Media Player Board

Solutions for the POP/POS/Digital Signage market

Developing and delivering digital media through a network of kiosks or individual displays currently requires investment in expensive hardware and software, with added costs related to the management, the technical staff requirements and the ability to update content and deliver it remotely.

The answer to this problem is **MediaMessenger Pro™**. **MediaMessenger Pro** is the first of its kind digital media solution that has a unique feature set that is unmatched in the digital signage industry. With the introduction of **MediaMessenger Pro**, Gulf Coast Digital Systems can now provide this technology at unbeatable prices.

MediaMessenger Pro is a fully functional Digital Media Player. **MediaMessenger Pro** connects directly to the internet—or can be operated stand alone. Content and control instructions are sent to the player from any internet connection using the **WebMessenger™**. The Digital Media Player then plays back the content sent to it from the remote site. All of this functionality is achieved WITHOUT the added cost of PC hardware and software.

Our fully self contained units include support for touch screens, bar code scanners, proximity sensors, push buttons, and membrane switches. Additional serial input devices can be supported. **MediaMessenger Pro** supports DVD navigation that allows for the use of standard DVD content creation tools. No need to purchase or use expensive software. The user interface and navigation are easily customized to meet your exact technical requirements and “*look and feel*”. **MediaMessenger Pro** is a solid-state design with the benefits of increased reliability and extended product life.

HARDWARE FEATURES

- Onboard network connection
- On-Screen-Display controller
- IDE / APTAPI interface for connection to Disc Drives or Compact Flash.
- Support for all major media formats
- S/PDIF digital audio output, AAC and AC-3 audio decode and playback.
